Franck Boue (ANSES) and Yousra Said (ENMV) conducting field activities in Tunisia

12-16 June 2023, Tunisia

Echino-Safe-Med surveillance was implemented in northwestern Tunisia, particularly in Siliana governorate, which is highly endemic for Cystic Echinococcosis (CE)

A total of 29 sheep farms were recruited for the study to perform the following activities:

- **Monitoring of CE in sheep**
- **Monitoring of echinococcosis in dogs**

Franck Boue (ANSES, France) visited the ENMV team (in the picture Yousra Said) to participate in field monitoring and provide training on the use of FTA[®] cards for sampling hydatid cysts during slaughterhouse activities
